PREFACE

Reference works too often present an austere, depersonalized façade. Although one knows that they are manmade, one feels far removed from the people who labor behind the scenes to make them possible. The literature analysts and others who prepare the *Index Medicus*® today are the intellectual descendants of a brilliant and imaginative individual who conceived of a comprehensive index when none existed, and of his successors who carried on the work in spite of frequent adversities.

The first volume of *Index Medicus* was published in 1879, but the story leading up to that event began in 1865, when Dr. John Shaw Billings, a surgeon in the Civil War, was assigned to the office of the Surgeon General of the Army. Among other duties, he was given responsibility for the Surgeon General's small medical library. Perceiving that there were few if any libraries in the country holding a substantial proportion of the medical literature, Billings set about a program of expansion. Within eight years, he had built a collection of 1,800 volumes into one containing over 50,000 volumes and pamphlets. Because there was then no comprehensive medical index, he proceeded with plans to publish a catalog of the library, and a periodical index to the current literature.

John Shaw Billings, M.D.

Undaunted when public funds were not authorized for the latter purpose, he found a publisher who would assume the entrepreneurial risk, some physicians to subsidize the project,

and he contributed his own time, outside of duty hours, to the selection of the articles to be indexed.

"Few words are required to demonstrate the utility of the projected serial," wrote the editors in their introduction to Volume 1. "The practitioner will find the titles of parallels for his anomalous cases ... and the latest methods in therapeutics. The teacher will observe what is being written or taught by the masters of his art in all countries. The author will be enabled to add the latest views and cases to his forthcoming work, or to discover where he has been anticipated by other writers."

An early crisis was announced at the end of Volume 6. "With this issue," reads the notice, "the *Index Medicus* will cease to be published." The publisher, Mr. Leypoldt, had died and the managers of his estate could not continue to support the losses that the publication of the *Index* had incurred from the start. "The time has come, therefore, when neither zealous friends nor generous publishers can be allowed to make further efforts or sacrifices, and the publication is discontinued. Whether it will, in some other shape, or under some other auspices, again appear, is for the future to decide." Happily another altruistic publisher was found promptly, and *Index Medicus* continued without missing a volume.

Dr. Billings had founded well, and the *Index Medicus* always received his support even while his energies were otherwise directed. The range of his activities, both during his tenure as head of the Library and after his retirement from the Army in 1895, was phenomenal. They encompassed not only the operation of the

Fielding H. Garrison, M.D.

Robert Fletcher, M.D.

Library but also aspects of the 10th Census (1880), assisting the organizers to staff the new Johns Hopkins Medical School and hospital and designing the hospital buildings, the organization and direction of the New York Public Library, and chairmanship of the Board of Trustees of the Carnegie Institution.

From the beginning, a large part of the responsibility and credit for implementing Dr. Billings' idea was shared by his colleague and successor, Dr. Robert Fletcher, who carried on the work, with a minor interruption, from 1879 until his retirement in 1912 at age 89. He in

turn was succeeded by Dr. Fielding Garrison who had earned a medical degree after joining the library staff in 1891, and had become Associate Editor in 1903. Dr. Garrison remained editor until the merger of *Index Medicus* with the Quarterly Cumulative Index in 1927. In addition to his editorial duties, he is renowned for his authorship of many historical papers and for his classic "An Introduction to the History of Medicine."

Although the *Index Medicus* underwent changes in title and frequency of issue, its publication over the past century was sustained without interruption. The Library has always been involved in indexing the literature, even when the expenses of publishing have been borne by others. Among these were private companies (F. Leypoldt, 1879-1884, George S. Davis, 1885-1894, and Rockwell and Churchill, 1895-1899); the Institute of Bibliography in Paris (1900-1902); the Carnegie Institution (1903-1926); and the American Medical Association (1927-1959).

In 1960, the National Library of Medicine (the direct organizational descendant of the Library of the Surgeon General) resumed publishing *Index Medicus* monthly under its original title, and its printing and distribution have been handled by the U.S. Government Printing Office. Also from 1960 there has been published an annual cumulation known as *Cumulated Index Medicus*. The first four annual volumes were published by the American Medical Association; since 1964 it has been published by the National Library of Medicine (NLM).

In 1960, the same year NLM resumed responsibility for publishing *Index Medicus*, the Library wrote specifications for a computerized system to aid in its preparation. Not only did the new system

facilitate an improved and more timely *Index Medicus*, but it and its successors have made possible the publication of a wide variety of specialized bibliographies and permitted individual searches of the entire database of *Index Medicus* references.

All *Index Medicus* references published since the sixties may be searched in MEDLINE on the World-Wide Web (www.nlm.nih.gov). Searching MEDLINE has many advantages over poring through *Index Medicus*; roughly 11 million references (35 years' worth) are searchable at one time; MEDLINE has many more references in the fields of nursing and dentistry than does *Index Medicus*; MEDLINE has article abstracts for many references; there are many more points of entry for locating a reference--any (as opposed to three or four) of the index terms assigned, even free text, will retrieve a reference; searches can be easily restricted to language, time, journal, and other limiting concepts; copies of articles may be requested through MEDLINE on the Web; related articles are easily identified through online browsing; and, of course, the user isn't confined to the shelf area where the *Index Medicus* is housed. The main advantage of the published volume is that it doesn't require power or a communications connection.

John Shaw Billings, seeking to improve medical communications, relied on the printed word as the most available means toward that end. The *Index Medicus* still has a role to play in accessing the printed work, but the growing World-Wide Web may presage an eventual change in how medical knowledge is communicated.

Donald A.B. Lindberg, M.D.
Editor-in-Chief, *Index Medicus*

2000 *Cumulated Index Medicus*: The End of an Era

The NLM will cease publishing the *Cumulated Index Medicus* (CIM) with this 2000 edition (Volume 41). The publication of the monthly *Index Medicus* will not be affected.

The production of the first CIM in 1960 was a major achievement of the Index Mechanization Project that predated the MEDLARS system (MEDical Literature Analysis and Retrieval System). For decades, CIM enhanced access to the biomedical literature, but its utility has declined as online access to MEDLINE data has increased.

Several factors have influenced the timing of the decision to end publication of the CIM. Among these are declining subscriptions, easier access by libraries and individuals to the Internet where *Index Medicus* citations can be searched free in MEDLINE via PubMed, and the fact that there are a variety of other commercial products containing *Index Medicus* citations. In addition, there has been a decision by the Government Printing Office to permit electronic access in place of hard copy publications for the U.S. Depository Libraries program.

Citations in *Index Medicus* and MEDLINE constitute an invaluable resource, and NLM guarantees they will always be available. The method of access may change, as technology evolves, but the millions of references and abstracts will always be freely accessible to scientists, the health professionals, librarians, and the public.

INDEX MEDICUS CITATION FORMAT

Since 1980, the format for journal article citations used in *Index Medicus* has conformed to American National Standard for Bibliographic References ANSI Z39.29-1977. This national standard was developed and is maintained by the National Information Standards Organization (NISO, Z39, formerly named American Standards Committee Z39) which is accredited by the American National Standards Institute to develop consensus standards for libraries, information science, and publishing. Over fifty organizations

representing the leading national libraries, information organizations, and publishers in the U.S. participate in the review and development of NISO standards. The use of these standard formats by medical publications is encouraged.¹

Any comments or questions on the standard should be directed to the developer of ANSI Z39.29-1977: National Information Standards Organization, P.O. Box 1056, Bethesda, MD 20827.

During 2001, the National Library of Medicine plans to produce *Index Medicus* using new publications software. The intent is to continue the current layout as closely as possible, but users of future issues of *Index Medicus* may notice slight variations in the placement of data or use of punctuation.

INTRODUCTION

Index Medicus® is the National Library of Medicine's monthly bibliography of the literature of biomedicine. The annual *Cumulated Index Medicus* ceased with Volume 41, 2000.

Users are invited to send suggestions or refer any errors they find to:
Donald A.B. Lindberg, M.D.
Editor-in-Chief, *Index Medicus*
National Library of Medicine
Bethesda, Maryland 20894

MATERIALS INDEXED

Index Medicus contains citations to the biomedical journal literature.

In the selection of materials for indexing, the National Library of Medicine (NLM) is advised by a chartered committee of distinguished physicians, medical editors, and medical librarians. This group, the Literature Selection Technical Review Committee (LSTRC), meets three times a year to review new titles, and periodically to examine the coverage in various subject fields. The Library indexes the literature that has been judged most useful to *Index Medicus* users, but it is not possible to include every journal that might contain useful articles.

An effort is made to maintain a reasonable balance of subject matter. The inclusion of a journal should not be construed as indicating that it is considered superior to one that is not indexed. The omission of a publication does not necessarily reflect on its quality.

Original journal articles are indexed, as well as those letters, editorials, biographies, and obituaries that have substantive contents. In certain journals which cover fields other than biomedicine, only those articles related to biomedicine are selected for inclusion in *Index Medicus*.

Some journals that are published in a foreign language are also published in English translation, but *Index Medicus* cites only one source. This is almost invariably the original foreign language publication because it is available earlier and is the ultimate source of information concerning the author's intent. However, a few exceptions to this rule are made where the translation is designated as an official translation and is issued at the same time as the original. Volume numbers and pagination for those journals are that of the official translation, which may be the same as that of the original. For up-to-date information about the availability of English translation journals, a medical librarian should be consulted.

A few medical journals publish several editions, intended for different countries or different groups of readers. *Index Medicus* cites only one edition - usually the one that is most widely distributed in the United States. Although the editors of some of these journals assure that the citations for the edition that is indexed is correct for all other editions, there are other journals for which this is not true. For this reason, the page and issue numbers included in the *Index Medicus* citations may not be helpful to the readers of variant editions of such journals.

Currently, the journal title abbreviations used in *Index Medicus*

are formulated according to the rules of the American National Standards for Information Sciences-Abbreviation of Titles of Publications, ANSI Z39.5-1985¹, except for the treatment of part or section designations and the omission of special characters and symbols and hyphens in compound words. Title abbreviations formulated under earlier guidelines have been retained in a few cases.

For the abbreviation of any specific journal cited in *Index Medicus*, see the *List of Journals Indexed in Index Medicus (LJI)* which is provided with the January issue of *Index Medicus* and in past annual cumulations. The *LJI* is also available separately from the Government Printing Office (see the list of NLM publications inside the front cover of *Index Medicus*) or from NLM's Web site (<http://www.nlm.nih.gov>).

THE INDEXING OPERATION

Materials selected for inclusion are indexed by highly trained literature analysts. The content of each piece is described by assigning terms selected from *Medical Subject Headings (MeSH)*, the Library's controlled vocabulary of technical terms, consisting of an alphabetic list of headings as well as hierarchical tree structures. *MeSH*® is published as a supplement to *Index Medicus* and appears with the January issue; it was reproduced in its entirety in previous annual editions of *Cumulated Index Medicus*. Additional copies of *MeSH* may be purchased from the Government Printing Office (see the list of NLM publications inside the front cover of *Index Medicus*).

In indexing, the analyst assigns as many subject headings as are necessary to describe adequately the content of each article. Each journal article is cited in *Index Medicus* under only those subject headings that represent the most important concepts of the article. All subject headings, including those representing more peripheral concepts, are stored in MEDLINE®, the Library's computer-based file of citations, for use in machine retrieval.

In *Index Medicus*, citations are published only under terms appearing in *MeSH*. If the medical concept sought is not a main heading in *MeSH*, the MeSH equivalent must be found. For example, citations on German measles would appear in *Index Medicus* under its MeSH equivalent, RUBELLA. When materials are indexed for *Index Medicus*, the most specific terms available in *MeSH* are used. Thus, if an article were concerned with aortic coarctation, it would be indexed under that term, rather than the broader HEART DEFECTS, CONGENITAL. Under the latter term, one would find only: (a) articles dealing with congenital heart defects generally; (b) those that deal in a very general way with a large number of named congenital heart defects; and (c) those that deal with specific congenital heart defects that have not been separately listed in *MeSH*.

The user who is interested in one concept may find that the broader term is also worth examining for articles of possible interest. Although one may be interested primarily in the etiology of aortic coarctation, reports on the general subject of the etiology of congenital heart defects may be useful. The user who wants information on some aspect of therapy for congenital heart defects in pediatric practice would certainly want not only the general materials that would appear under HEART DEFECTS, CONGENITAL, but also those concerned with specific congenital heart defects.

¹American National Standards Institute. American National Standard for Information Sciences-Abbreviation of Titles of Publications, 1985.

In addition, the user should note the "see related" references in *MeSH*. These references are used primarily to indicate related headings not occurring in the same subcategory of the *MeSH Tree Structures*. These headings may refer the user to citations related to the area of interest. However, the most obvious cross-references, such as those from an organ to its diseases, are avoided.

SUBJECT HEADINGS

Because it is impossible to group together all terms directly or indirectly related to a particular concept, the following should be considered when searching this bibliography:

1. Direct form of a term (LUNG ABSCESS)
2. Inverted form of a term (ANEMIA, HEMOLYTIC)
3. Noun form (LIVER; KIDNEY; BRAIN)
4. Adjective form (HEPATIC VEINS, CEREBRAL REVASCULARIZATION)
5. Consider also references printed under several headings
6. Function words which imply the concept in mind (THINKING for BRAIN, DIGESTION for DIGESTIVE SYSTEM)
7. Terms for techniques which imply the concept in mind (ELECTROCARDIOGRAPHY for HEART)
8. Synonyms or near-synonyms (JOHNE'S DISEASE see PARATUBERCULOSIS)
9. Broader and narrower terms

The best way to find broader and narrower terms is by reference to the *MeSH Tree Structures* where terms are grouped into fifteen subject categories and arranged in a hierarchical manner with specific terms indented under the more general one. For example, in subcategory C14, under CARDIOVASCULAR DISEASES, many types of cardiovascular diseases, such as HEART DEFECTS, CONGENITAL are listed. Indented under that term are several even more specific terms. Thus, broader or narrower terms may be found merely by scanning these hierarchical lists.

The *Index Medicus* user generally starts with one or more medical terms in mind which express his or her own subject interest. Many *MeSH* equivalents are printed in *MeSH* and *Index Medicus* as see references. If the user does not find a given term in the alphabetical list, examination of an appropriate "tree structure" may reveal a broader or more specific term under which the desired literature might have been indexed. When a usable term is found, examination of nearby entries in the alphabetic list may reveal related terms that are also worth searching in the *Index Medicus* Subject Section.

A system of 82 topical subheadings is available to subdivide the *MeSH* subject headings used in indexing each article. They afford a convenient means of grouping together those citations which pertain to a particular aspect of a subject. Of course, not every subheading is suitable for use with every subject heading. A given subheading is used only with certain subject headings, as listed in the Introduction of *Medical Subject Headings*. Two examples of subheadings are:

- (1) "anatomy & histology" – used with organs, regions, and tissues for normal descriptive anatomy and histology and for the normal anatomy and structure of animals and plants.
- (2) "diagnostic use" – used with chemical compounds, drugs, and physical agents when these substances are used for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.

In some cases a concept expressed by a *MeSH* heading/subheading combination is better represented by a different heading. In those cases, a reference to the preferred heading is printed, e.g.:

ACCIDENTS

PREVENTION & CONTROL see ACCIDENT PREVENTION

SUBJECT HEADING CHANGES

MeSH is revised and updated each year. A copy is distributed with the January issue of *Index Medicus*, and was also included in the first part of each past *Cumulated Index Medicus*. It should be available to every *Index Medicus* user.

A given volume of *Index Medicus* contains only the subject headings for which there are appropriate citations in that volume and cross-references to those subject headings. *MeSH* contains an alphabetic list of all allowable subject headings and cross-references, including those which may not be represented by citations in any given volume of *Index Medicus*.

Annually new subject headings are added and old ones deleted. The additions serve to provide logical places to look for newly emerging concepts, or they provide more specificity in expanding subject fields. In some cases they may replace older, less currently acceptable terminology for established concepts. Subject headings are deleted if they are concerned with subjects that are so rarely written about that they no longer merit a separate heading, or if they have been replaced by more up-to-date headings.

All additions and deletions are listed in the Introduction of *Medical Subject Headings* and in Book 1 of past annual editions of *Cumulated Index Medicus*.

In the annual *MeSH* revisions, the Library attempts to maintain a balance between flexibility and stability. Although it is preferable to have a dynamic thesaurus responsive to current changes in terminology as reflected in the indexed literature, the Library is aware that changes create problems for those who follow a subject in *Index Medicus* from year to year and for the many medical libraries that use *MeSH* subject headings in their catalogs. There is, therefore, a reluctance to introduce headings that offer only slight improvement or represent transient interests. There is also an effort to avoid fine distinctions that may be understood by only a limited group of users within a given subject field.

The Library's subject headings tend to follow – rather than anticipate – the usage in the literature. When possible, preference is given to terminology that has the support of major professional organizations, with the realization that few such authorities attain universal acceptance.

ARRANGEMENT

Subject Section

Each article cited in *Index Medicus* is printed under one or more subject headings, and the entry appears in full under each.

Journal Articles:

Each entry contains the following elements, in order: original English title of article, or English translation of title in brackets; first author (if more than one) or sole author; journal title abbreviation; date of issue; volume number; issue, part or supplement; inclusive pagination; the notation Eng. Abstr. For those non-English articles which provide an abstract in English; and an abbreviation indicating the language of the article if other than English. For the names of authors in a citation, refer to the Author Section. The journal title abbreviation is in boldface type; the full journal title may be found in the *List of Journals Indexed in Index Medicus*.

Examples of typical journal article citations:

Calpain inhibition protects against virus-induced apoptotic myocardial injury. DeBiasi RL, et al. **J Virol** 2001 Jan;75(1):351-61

cited under CALPAIN/*ANTAGONISTS & INHIBITORS; CYSTEINE PROTEINASE INHIBITORS/*THERAPEUTIC USE; DIPEPTIDES/*THERAPEUTIC USE; MYOCARDITIS/*PREVENTION & CONTROL; REOVIRIDAE INFECTIONS/*DRUG THERAPY.

Diagonal trunk muscle exercises in peripartum pelvic pain: a randomized clinical trial. Mens JM, et al. **Phys Ther** 2000 Dec;80(12):1164-73

cited under EXERCISE THERAPY/*METHODS; LOW BACK PAIN/*THERAPY.

Order of Citations:

Citations listed in *Index Medicus* are arranged alphabetically by *MeSH* subject heading. Under each subject heading, the articles are grouped together in the following manner:

- (1) general articles to which no subheading has been assigned;
- (2) articles which are listed under the appropriate subheadings.

Under each subject heading or subheading, the entries are grouped according to the original language of the text, with the English language items appearing first, followed by citations for works published in other languages, arranged alphabetically by language. Within each language group, the articles are alphabetically ordered by journal title abbreviation.

Non-English Language Abbreviations:

Afr	Afrikaans	Kor	Korean
Ara	Arabic	Mul	Multiple Languages
Bul	Bulgarian	Nor	Norwegian
Cat	Catalan	Pol	Polish
Chi	Chinese	Por	Portuguese
Cze	Czech	Rum	Romanian
Dan	Danish	Rus	Russian
Dut	Dutch	Sec	Serbo-Croatian (Cyrillic)
Fin	Finnish	Scr	Serbo-Croatian (Roman)
Fre	French	Slo	Slovak
Ger	German	Spa	Spanish
Heb	Hebrew	Swe	Swedish
Hun	Hungarian	Tha	Thai
Ita	Italian	Ukr	Ukrainian
Jpn	Japanese		

Overall Citations:

When an issue of a serial contains a sequence of articles having a unifying theme, a citation may be created to lead readers to the sequence as a whole. These overall citations are made for proceedings of major national and international conferences and for abstracts of proceedings. The latter are labeled "Abstracts" in the title but are not indexed individually. No authors' names appear on overall citations.

Example of overall citation when individual articles are indexed:

Proceedings of the South-Eastern Organ Procurement Foundation meeting. 16 September 1999, Memphis, Tennessee, USA. **Clin Transplant** 2000 Aug;14(4 Pt 2):363-438

Examples of individual citations included with the above overall:

Living kidney donation: recovery and return to activities of daily living. Peters TG, et al. **Clin Transplant** 2000 Aug;14(4 Pt 2):433-8

Laparoscopic live donor nephrectomy: pre-operative assessment of technical difficulty. Ratner LE, et al. **Clin Transplant** 2000 Aug;14(4 Pt 2):427-32

Mycophenolate mofetil, with cyclosporine and prednisone, reduces early rejection while allowing the use of less antilymphocytic agent induction and cyclosporine in renal recipients with delayed graft function. Arnold AN, et al. **Clin Transplant** 2000 Aug;14(4 Pt 2):421-6

Example of overall citation when individual items are abstracts:

Annual Scientific Meeting of the British Hypertension Society. Cambridge, United Kingdom, 11-13 September 2000. Abstracts. **J Hum Hypertens** 2000 Dec;14(12):837-56

Retractions:

When an article is retracted in the journal in which it was originally published, the retraction is cited under the heading RETRACTION OF PUBLICATION [Publication Type]. (Publication Type is a rubric introduced in 1991 to indicate the nature of a publication rather than its subject matter.) The electronic citation for the original article is also amended – with the heading RETRACTED PUBLICATION.

Original article (RETRACTED PUBLICATION
[Publication Type])

Stable RNA/DNA hybrids in the mammalian genome: inducible intermediates in immunoglobulin class switch recombination [retracted by Tracy RB, Hsieh CL, Lieber MR. In: *Science* 2000 Aug 18;289(5482):1141] Tracy RB, et al. **Science** 2000 May 12;288(5468):1058-61

Retracting article (RETRACTION OF PUBLICATION
[Publication Type])

Retraction [retraction of Tracy RB, Hsieh CL, Lieber MR. In: *Science* 2000 May 12;288(5468):1058-61] [see comments]. Tracy RB, Hsieh CL, Lieber MR. **Science** 2000 Aug 18;289(5482):1141. Comment in: *Science* 2000 Aug 18;289(5482):1137

Errata:

When a published erratum is printed in a subsequent issue of the journal in which an article appeared originally, the electronic citation is amended to include reference to the publisher's correction.

Presence of bacterial DNA and bacterial peptidoglycans in joints of patients with rheumatoid arthritis and other arthritides [published erratum appears in *Arthritis Rheum* 2000 May;43(5):1061] van der Heijden IM, et al. **Arthritis Rheum** 2000 Mar;43(3):593-8

The original printed citation for retracted articles and those containing errors noted by errata are not corrected in the monthly *Index Medicus*. Past annual *Cumulated Index Medicus* publications could have reflected changed citations, as they were obtained from the corrected online database.

Commentary:

When comments on a published article appear in the same or a subsequent issue of the journal in which the paper originally appeared, both the original and the commenting citations are amended to indicate the presence of commentary.

Original article (Comment in)

Lidocaine-induced conduction disturbance in patients with systemic hyperkalemia [see comments] McLean SA, et al. *Ann Emerg Med* 2000 Dec;36(6):615-8. Comment in: *Ann Emerg Med* 2000 Dec;36(6):626-7

Commenting article (Comment on)

Empiric lidocaine: Deja vu (all over again?) [letter; comment]. Cairns CB, et al. *Ann Emerg Med* 2000 Dec;36(6):626-7. Comment on: *Ann Emerg Med* 2000 Dec;36(6):547-53. Comment on: *Ann Emerg Med* 2000 Dec;36(6):615-8

Author Section

Author:

Effective with articles published in 2000, the National Library of Medicine no longer limits the number of author names in *Index Medicus*. For journal issues published from 1996-1999 NLM's policy is to take up to 25 authors. If there are more than 25 authors for an article, the 25 names listed will be the first 24 named authors and the last author in the sequence. All authors listed between the 24th and the final author will be represented by "et al." Names from non-Roman alphabets are transliterated, with a limit of ten, (see below under Title) and Chinese and Japanese names are given as shown in the journal. The complete citation is printed only under the first author's name; names of all other authors are cross-referenced to the full citation under the first author's name, thus:

Baker CM, McGowan FX Jr, Keane JF, Lock JE.
Pulmonary artery trauma due to balloon dilation: recognition, avoidance and management. *J Am Coll Cardiol* 2000 Nov 1;36(5):1684-90

McGowan FX Jr see Baker CM
Keane JF see Baker CM
Lock JE see Baker CM

Title:

The author is followed by the title of the article in the vernacular, and then the other bibliographic elements as they appear in the Subject Section (described above). The title of the article is supplied in brackets in translated form only (as in the Subject Section), and not in the vernacular, for citations in the following languages: Arabic, Chinese, Hebrew, Japanese, Korean, and Thai. Titles in the following languages are transliterated into Roman script: Bulgarian, Russian, Serbo-Croatian, and Ukrainian.

Example of title in the vernacular:

Letaief B, Boughattas S, Hassine H, Essabbah H.
Scintigraphie osseuse et cancer de la prostate. *Ann Urol (Paris)* 2000 Aug;34(4):254-65 (Eng. Abstr.) (Fre)

Example of translated title:

Manabe S, Sunamori M, Sakamoto T, Tanaka H, Ohshima N, Hasegawa S, Watanabe M, Yoshizaki T. [Coronary arterial revascularization in dialysis patients] *Kyobu Geka* 2000 Sep;53(10):825-30 (Eng. Abstr.) (Jpn)

Example of transliterated title:

Druzhinin VG, Minina VI, Mokrushina NV. Tsitogeneticheskie narusheniia u rabochikh koksokhimicheskogo proizvodstva. *Med Tr Prom Ekol* 2000;(10):22-4 (Rus)

Name of Individual as Subject:

Articles about individuals are cited in the Author Section with the subject's name enclosed in parentheses and preceding the other components of the entry. A separate entry is also provided under the name of the author in the usual manner. An anonymous biography or obituary will appear only under the subject's name.

(Shakespeare W), Covey H. Shakespeare on old age and disability. *Int J Aging Hum Dev* 2000;50(3):169-83

Covey H. Shakespeare on old age and disability. *Int J Aging Hum Dev* 2000;50(3):169-83

Anonymous Non-English Citations:

A separate subsection is provided at the end of the Author Section for anonymous non-English language references. Special treatment is accorded the material in order to have an authentic reference to the work in the original language form. In this subsection, the journal article entries are arranged alphabetically under the journal title abbreviation.

MMW Fortschr Med

Blutdrucksenkung und mehr: ACE-Hemmer bald Standard bei KHK? *MMW Fortschr Med* 2000 Oct 19;142(42):50-1 (Ger)

Bibliography of Medical Reviews

From 1955 through 1987, the Library defined medical reviews as well-documented surveys of the recent biomedical literature. In response to user requests, the Library broadened this definition in 1988 to encompass reviews of current thinking on a given subject, regardless of the age of the literature cited, and to include categories of material previously excluded. Types of articles now considered to be reviews include academic, classical or exhaustive reviews; tutorial, didactic or subject reviews; multicase or epidemiologic reviews; consensus conferences; reviews of reported, known or published cases; and state-of-the-art reviews.

Materials with the following characteristics are not considered as reviews: case reports or original research articles containing a review of the literature as an adjunct; statistical and epidemiological surveys; bibliographies which comprise only a list of references; historical articles; monthly summaries of a subject area which appear as a regular feature in journals; and theses.

Citations to reviews are included in the "Bibliography of Medical Reviews" section of the monthly *Index Medicus* and past editions of *Cumulated Index Medicus*, as well as in the Subject Section and Author Section of each. In the latter sections, users can distinguish review articles from standard citations by the number of references shown in parentheses at the end of the source. "0 ref." Indicates that the bibliographic references were not printed in the article.

ACCESS TO ARTICLES CITED

Most of the literature in the general and historical collections of the National Library of Medicine (NLM) is available on interlibrary loan to any library. NLM provides copies of journal articles and loans books, audiovisuals and microforms. NLM's interlibrary loan services are available only to libraries. NLM is the library of last resort for materials that are not available from local or regional libraries. Individuals who need access to medical literature should make a request through a local library or register with a Loansome Doc library that agrees to provide articles to them.

Requests sent to NLM must comply with these instructions and with the provisions of the National Interlibrary Loan Code of the American Library Association (ALA).

ACCESS TO NLM

U.S. Medical Libraries

- Libraries in the National Network of Libraries of Medicine® (NN/LM) should send requests via DOCLINE®, NLM's automated interlibrary loan request and referral system.
- The Regional Medical Library (RML) in your area will answer interlibrary loan related questions and assist you with obtaining DOCLINE access. To reach the RML, phone 1-800-338-RMLS (7657) or visit the NN/LM web page.

U.S. Non-Medical Libraries

- Non-medical libraries in the U.S. that have a recurring need for medical information should contact the RML to discuss how they may be served best. To reach your RML, phone 1-800-338-RMLS (7657) or visit the NN/LM web page.
- Non-medical libraries in the U.S. may send requests to NLM after determining that the material is not available locally or regionally.

Canadian Libraries

- Medical libraries in Canada should send requests via DOCLINE. Requests should route to the Canada Institute for Scientific and Technical Information (CISTI) before they are sent to NLM.
- CISTI coordinates Canadian access to DOCLINE for NLM. Medical libraries in Canada should discuss obtaining access to DOCLINE with CISTI.
- Non-medical or libraries without DOCLINE access should request materials from Canadian medical libraries or from CISTI.

Other Non-U.S. Libraries

- A small number of libraries outside the U.S. have access to DOCLINE and will accept requests for articles via Loansome Doc. The list of Non-U.S. Libraries Providing Document Delivery Internationally using DOCLINE is available from NLM's web site.
- Libraries that cannot identify a DOCLINE library willing to serve them may send requests for articles to NLM for items not available in their country.
- Material in original form is not loaned outside of the U.S.

BORROWING METHODS

DOCLINE is the preferred method of receiving requests. Requests received via DOCLINE are processed more quickly.

- General Collection, - LIBID: MDUNLM
- General Collection, Clinical Emergency Requests Only - LIBID: MDULMF
- Historical Collection - LIBID: MDUHMD

Non-DOCLINE requests require additional processing time.

- Internet: ill@nlm.nih.gov
- ALS and IFLA preprinted interlibrary loan forms
- Telefacsimile: (301) 496-2809

REQUEST REQUIREMENTS

All requests for material to be loaned or copied must include a statement of conformance to either the U.S. Copyright Act of 1976 (CCL) or the Copyright Guidelines (CCG). To request:

- Include the library identification (LIBID) number of the requesting library. A LIBID number is assigned to all libraries that borrow from the NLM. It is required for subsequent requests.
- Request each item or item segment (chapter, part of issue, etc.) separately.
- Verify citations in NLM databases or publications and enter into DOCLINE using the unique identifier number of the item. Non-DOCLINE requests should contain the NLM call number. To obtain call numbers, access LOCATORplus, NLM's online public access catalog at the following Web site: <http://www.nlm.nih.gov/locatorplus>.
- Give source of verification and state the specific NLM database containing the citation. Include the citation or serial unique identifier.
- Include the authorizing person's name (electronic transmissions) or the signature of the authorizing person at the borrowing library (mailed).
- NLM will refer interlibrary loan requests when "Refer On" is indicated as a comment on an electronically transmitted request or typed at the top of an ALA or IFLA form. Requests must be within the scope of the NLM collection, not available at NLM, carry complete citation information and be identified by NLM as being held by another library.
- Most requests received at NLM are processed within 24 hours. It is not possible for NLM to cancel a request once it is received.

LOAN PERIOD

The loan period for original material, microfilm and audiovisuals is one month. No renewals are granted. Libraries with overdue items will be billed for lost materials after two overdue notices have been sent. Interlibrary loan service will not be provided to libraries with delinquent accounts.

DELIVERY AND RETURNS

NLM will deliver material that has been copied by Ariel, fax (See Charges), and U.S. mail. Original materials are delivered by courier service to ensure their safety. NLM pays postage for outgoing loans.

For the protection of the borrowing library, NLM suggests that materials be insured or registered and that a return receipt be requested. The borrowing library pays postage; is responsible for material from time of receipt until the item is returned and received at NLM; will replace materials lost or irreparably damaged, and meet repair costs for damaged materials.

- Return post-1913 monographs, post-1969 audiovisuals, and microfilm to the Collection Access Section.
- Return pre-1970 audiovisuals to the History of Medicine Division.

CLINICAL EMERGENCIES

During the hours that NLM is open, Clinical Emergency requests will be filled within two hours. If NLM is unable to fill the requests, notification will be transmitted within two hours.

- Only those requests needed for emergency patient care qualify for this service.
- DOCLINE participants should prefix these requests to NLM at LIBID: 20209C.

CHARGES

- U.S. Libraries - \$9.00
- Canadian and other non-U.S. libraries - \$11.00
- Additional Fax Charge - \$3.00
- Federal libraries that frequently need items from NLM should contact NLM to discuss charges.

Do not send payment with the loan request. Invoices will be issued quarterly by the National Technical Information Services (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161 and are payable to NTIS. Libraries must establish a deposit account with NTIS to facilitate payment. Coupons are not accepted as payment for these charges. Interlibrary loan service will not be provided to libraries with delinquent accounts.

Keep a copy of each loan request form. The loan request number appears on the summary page of the invoice and is needed to interpret the invoice charges. NLM is unable to provide a second copy at the end of the quarter.

SPECIAL PHOTOGRAPHIC SERVICES

Many of the photographs or slides of portraits, prints, charts, and other pictorial works in the collection may be viewed from the Images from the History of Medicine web page. Ordering copies from this material requires special procedures. Link to information about these procedures from the web page or write to: Prints and Photographs Collection, History of Medicine Division (address below) for information and costs. Orders requiring copyright owner's permission will not be accepted unless accompanied by this permission in writing.

CONTACTS

For journal material published after 1870, monograph material published after 1913 and audiovisual material produced after 1969:

OTHER RESOURCES

NATIONAL NETWORK OF LIBRARIES OF MEDICINE®

REGIONAL MEDICAL LIBRARIES

The mission of the National Network of Libraries of Medicine (NN/LM®) is to advance the progress of medicine and improve the public health by providing all U.S. health professionals equal access to biomedical information and by improving the public's access to information to enable them to make informed decisions about their health. The Program is coordinated by the National Library of Medicine and carried out through a nationwide network of health science libraries and information centers.

The network is administered by the National Library of Medicine. It consists of eight Regional Medical Libraries (major institutions under contract with the National Library of Medicine), more than 140 Resource Libraries (primarily at medical schools), and some 4,700 Primary Access Libraries (primarily at hospitals). The Regional Medical Libraries administer and coordinate services in the network's eight geographical regions.

The National Information Infrastructure offers the network new and exciting opportunities to improve information services to health professionals in the 2001-6 contracts. The Regional Medical Libraries will continue their efforts to reach underserved health professionals in rural and inner city areas, public health professionals, and special populations. NN/LM members will work with a variety of intermediaries, including health care providers, public health professionals, public librarians, educators, community organizations, health advocacy groups, faith-based organizations, and self-help groups, to reach members of the public.

The Regional Medical Libraries also exhibit and demonstrate NLM's products and services at national, regional and state health professional and consumer oriented meetings; provide training and consultations; coordinate the basic network services such as interlibrary loan; work to improve the supporting infrastructure for health sciences libraries; and assist with access to MEDLINE®; and other databases made available by the National Library of Medicine.

One Regional Medical Library, the New York Academy of Medicine, serves as the National Training Center and Clearinghouse for the nation, providing training on NLM systems throughout the U.S.

For more information about specific network programs in your region, call the Regional Medical Library in your area at their direct number (see attached list) or dial the toll free phone number for all Regional Medical Libraries: 1-800-338-7657.

INTERNATIONAL MEDLARS CENTERS

The National Library of Medicine (NLM) enters into bilateral agreements with public institutions in foreign countries to serve as International MEDLARS Centers. These Centers assist health professionals in accessing MEDLARS databases, offer search training, provide document delivery and perform other functions as biomedical information resource centers.

Many Centers have sites on the World-Wide Web (see URL's below).

For more specific information regarding NLM's International Programs, please contact:

Associate Director for Health Information Programs Development
National Library of Medicine
8600 Rockville Pike
Bethesda, MD 20894

ip@nlm.nih.gov

For information about the services offered by any International MEDLARS Center, please write, call, or send an e-mail inquiry directly to that Center or visit their Home Page on the World-Wide Web.

*MEDLARS (MEDical Literature Analysis and Retrieval System) is the computerized system of databases and databanks offered by the National Library of Medicine.

PREFACE

The 2000 issue of *Medical Subject Headings (MeSH®)* is the primary listing of subject descriptors appearing in *Index Medicus®*.

As in previous years, citations will be found in *Index Medicus* only under those subject headings that appear in large type in this version of *MeSH*. If the concept sought is not a main heading in *MeSH*, the most relevant MeSH descriptor must be found. Many synonyms, near-synonyms, and closely related concepts are printed in *MeSH* and *Index Medicus* as see references.

Those with online access to the MEDLINE® database may find the *Medical Subject Headings Annotated Alphabetic List* better suited to their needs. The annotated *MeSH* contains geographic headings, "check tags," such as male, female, and human, and other data elements that are of value to the MEDLINE searcher, but that are not used in *Index Medicus*. Various online systems provide access to *MeSH*. These include the ELHILL® MeSH file and MeSH data linked to Internet Grateful Med® and PUBMED®. The *Medical Subject Headings Annotated Alphabetic List* is available through the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161; telephone 1-800-553-6847 or 703-605-6000.

For those with electronic access, a web page provides additional information about MeSH and direct access to MeSH data and guides: <http://www.nlm.nih.gov/mesh/>

This page is intentionally blank.

MeSH INTRODUCTION

The 2000 *MeSH* is the current authority list for the subject analysis of biomedical literature at the National Library of Medicine (NLM). It presents the subject headings used for grouping citations in *Index Medicus*, serves as the basis for search formulations in retrieval of bibliographic citations stored in the NLM databases, and is the standard subject heading list for the cataloging of books, audiovisuals, and electronic resources in the Library. This edition of *MeSH* is designed particularly for *Index Medicus* users. Introductory material of special interest to medical librarians is also included.

Medical Subject Headings is divided into two sections: Alphabetic List and Tree Structures.

ALPHABETIC LIST

The Alphabetic List section contains the subject headings arranged in alphabetic order with cross-references.

Commonly used forms of English expressions are generally preferred for use as subject headings. Related expressions should also be considered. Someone who is interested in lungs should also refer to terms containing the word roots pulmo- and pneumo-. **Consider also** references have been established for many terms to suggest additional possibilities in locating concepts. The **consider also** references denote the presence of linguistically related concepts. For example, the heading KIDNEY has a reference "consider also terms at GLOMERUL-, NEPHR-, PYEL-, and RENAL."

When a group of terms share a basic concept, they may be arranged alphabetically under that concept and thus direct natural-language sequence is not always used. For example, tuberculosis in its various forms and relationships is expressed by a series of headings starting with TUBERCULOSIS (TUBERCULOSIS, AVIAN; TUBERCULOSIS, BOVINE).

The criteria for creation of subject headings include the frequency of usage in the medical literature; recognition of the need for the descriptor by various users of *MeSH*; and the extent to which the term is unique and unambiguous.

Citations will be found in *Index Medicus* only under the *MeSH* terms appearing in large type. All other entries in the Alphabetic List are cross-references that lead, directly or indirectly, to appropriate *Index Medicus* descriptors.

Cross-references are of two kinds:

Referring to
another term

see
see related

Luteinizing Hormone see LH

LH

X Luteinizing Hormone

Corresponding
"referred from"
designation

X
XR

See cross-references, while originally conceived of as synonyms for the headings to which they referred, cannot be considered synonyms of headings. Some terms, because of their narrow focus are not useful as subject headings and they are instead, created as, cross-references.

See related references are used primarily to indicate related headings not occurring in the same subcategory of the *MeSH* Tree Structures (see below). Many of the most obvious cross-references, such as those from an organ to its diseases, are omitted.

A descriptor may be followed by a history note. The note begins with the year the descriptor entered the system as an *Index Medicus* descriptor, unless the descriptor has been in use continuously since 1963. If there is more than one date, the first date given is the year of re-entry of a descriptor that had previously been deleted from the system. Where necessary, a range of dates is given.

The history note also traces changes in the descriptor and its cross-references. The kinds of descriptors with history notes include: (1) descriptors that existed previously as see or see under cross-references; (2) descriptors that existed previously in a different form (spelled differently, inverted, formerly singular, etc.); (3) descriptors now having see cross-references (shown under the descriptor following X) that existed previously as descriptors themselves or as cross-references to a different descriptor; and (4) beginning in 1992, descriptors that existed previously as Supplementary Chemical Records. The latter form an auxiliary file in *MeSH* containing records for chemicals and drugs encountered in the literature indexed for *Index Medicus* but not seen frequently enough to warrant creation of a *MeSH* descriptor term.

Examples of descriptors with history notes:

Adrenal Cortex

78,63-67; was see under ADRENAL GLANDS 1968-77

The history note shows that citations on the adrenal cortex may be found in *Index Medicus* under ADRENAL CORTEX since 1978 and from 1963 through 1967; from 1968 through 1977 citations may be found under ADRENAL GLANDS.

Terfenadine

92; TERFENADINE was indexed under BENZHYDRYL COMPOUNDS 1978-91

The history note indicates that citations referring to this chemical may be found under BENZHYDRYL COMPOUNDS from 1978 through 1991.

History notes pertaining to cross-reference changes always appear with the descriptor to which they refer. For example, the history note for "SYNCHROCYCLOTRONS" see CYCLOTRONS" is as follows:

Cyclotrons

93; was see PARTICLE ACCELERATORS 1978-92;
SYNCHROCYCLOTRONS see see PARTICLE
ACCELERATORS 1978-92

X Synchrocyclotrons

Each descriptor is followed by one or more alphanumeric expressions (tree numbers) that indicate where in the Tree Structures the term is to be found. A plus sign following a tree number in the Alphabetic List indicates there are more specific descriptors in the Tree Structures at that number under that descriptor.

Descriptors may be qualified or characterized by sub-headings. These are discussed under SUBHEADINGS at the end of this section.

TREE STRUCTURES

These are lists in which the subject headings are divided into categories such as Anatomy (Category A), Organisms (Category B), etc. Most categories are further divided into subcategories, each of which is identified by an alphanumeric designation. Thus, B1 includes Invertebrates, B2 includes Vertebrates, etc. The *MeSH* descriptors in each subcategory are arranged hierarchically, in up to nine levels, from the most general to the most specific. Because of the branching structure of the hierarchies, these lists are sometimes referred to as "trees". Each *MeSH* descriptor appears in at least one place in the trees, and may appear in as many additional places as may be logically appropriate.

These trees should not be regarded as representing an authoritative subject classification system but are rather arrangements of descriptors for the guidance and convenience of persons who are assigning subject headings to or searching for literature in *Index Medicus* and in other National Library of Medicine products and databases. The trees are not an exhaustive classification of the subject matter but contain only those terms that have been selected for inclusion in this thesaurus. Their structure frequently represents a compromise among the views and needs of particular disciplines and users, in the absence of any single universally accepted arrangement.

Those who index articles for inclusion in MEDLARS are instructed to find and use the most specific *MeSH* descriptor that is available to represent each indexable concept. For example, articles concerning *Streptococcus pneumoniae* will be found under the descriptor STREPTOCOCCUS PNEUMONIAE rather than the broader term STREPTOCOCCUS, while an article referring to a new streptococcal bacterium which is not yet in the vocabulary will be listed directly under STREPTOCOCCUS. Accordingly, the user of *Index Medicus* may consult the trees to find additional subject headings which are more specific than a given heading, and broader headings as well. For example, under ABNORMALITIES, there are specific abnormalities:

Abnormalities C16.131

Abnormalities, Drug-Induced C16.131.42

Abnormalities, Multiple C16.131.77

Alagille Syndrome C16.131.77.65

Angelman Syndrome C16.131.77.95

In the trees, each descriptor is followed by the number that indicates its tree location. It may also be followed by one or more additional numbers, in smaller type, and truncated at the third level, indicating other tree locations of the same term. The numbers serve only to locate the descriptors in each tree and to alphabetize those at a given tree level. They have no intrinsic significance; e.g., the fact that D12.775.641 and D12.644.641 both have the three digit group 641 does not imply any common characteristic.

The trees also contain geographic descriptors (Category Z), which also do not appear in the Alphabetic List. These descriptors are not *Index Medicus* descriptors but may be used in searching MEDLINE.

Because this edition of *MeSH* is designed for users of *Index Medicus*, information used primarily in indexing, cataloging, and MEDLINE searching has been omitted. For these purposes, use of *Medical Subject Headings Annotated Alphabetic List, 2000* is recommended. This is available from:

National Technical Information Service
5285 Port Royal Road
Springfield, Virginia 22161
1-800-553-6847 or 703-605-6000

NEW HEADINGS & DELETIONS

Lists are provided of: (a) new descriptors which have been introduced with 2000 *MeSH*, together with the descriptors under which these concepts were previously indexed; (b) descriptors which have been deleted, with the subject descriptors that have replaced them; and (c) new descriptors, listed by previous descriptors under which their contents were indexed.

SUBHEADINGS

There are 82 topical subheadings or qualifiers used for indexing and cataloging in conjunction with subject headings. Subheadings afford a convenient means of grouping together those citations which are concerned with a particular aspect of a subject. Of course, not every subheading is suitable for use with every subject heading. In the following subheadings, the Tree categories in parentheses are a general guide to the descriptors permitted with the subheading. Generally a subheading may be used with the descriptors in a given subcategory but there may be exceptions and there may be a few descriptors in subcategories not listed which are permitted with the descriptor. For more specific information on subheadings allowed with a given descriptor consult the annotation for the descriptor in *Medical Subject Headings Annotated Alphabetic List, 2000*.

abnormalities (A1-5, A7-10, A13, A14, B2) - Used with organs for congenital defects producing changes in the morphology of the organ. It is used also for abnormalities in animals.

administration & dosage (D) - Used with drugs for dosage forms, routes of administration, frequency and duration of administration, quantity of medication, and the effects of these factors.

adverse effects (B6, D, E1-4, E6, E7, J2) - Used with drugs, chemicals, or biological agents in accepted dosage - or with physical agents or manufactured products in normal usage - when intended for diagnostic, therapeutic, prophylactic, or anesthetic purposes. It is used also for adverse effects or complications of diagnostic, therapeutic, prophylactic, anesthetic, surgical, or other procedures, but excludes contraindications for which "contraindications" is used.

agonists (D1-7, D9-17, D19-23) - Used with chemicals, drugs, and endogenous substances to indicate substances or agents that have affinity for a receptor and intrinsic activity at that receptor. (From *Textbook of Pharmacology, 1991, p.16*)

analogs & derivatives (D3) - Used with drugs and chemicals for substances that share the same parent molecule or have similar electronic structure but differ by the addition or substitution of other atoms or molecules. It is used when the specific chemical heading is not available and no appropriate group heading exists.

analysis (D) - Used for the identification or quantitative determination of a substance or its constituents and metabolites; includes the analysis of air, water, or other environmental carrier. It excludes the chemical analysis of tissues, tumors, body fluids, organisms, and plants for which "chemistry" is used. The concept applies to both methodology and results. For analysis of substances in blood, cerebrospinal fluid, and urine the specific subheading designating the fluid is used.

anatomy & histology (A1-5, A7-10, A13, A14, B2, B6) - Used with organs, regions, and tissues for normal descriptive anatomy and histology, and for the normal anatomy and structure of animals and plants.

antagonists & inhibitors (D1-17, D19-23) - Used with chemicals, drugs, and endogenous substances to indicate substances or agents which counteract their biological effects by any mechanism.

biosynthesis (D8, D9, D11-13, D17, D24) - Used for the anabolic formation of chemical substances in organisms, in living cells, or by subcellular fractions.

blood (B2, C, D1-24, D27, F3) - Used for the presence or analysis of substances in the blood; also for examination of, or changes in, the blood in disease states. It excludes serodiagnosis, for which the subheading "diagnosis" is used, and serology, for which "immunology" is used.

blood supply (A1-5, A8-10, A13, A14, C4) - Used for arterial, capillary, and venous systems of an organ or region whenever the specific heading for the vessel does not exist. It includes blood flow through the organ.

cerebrospinal fluid (B2, C, D1-24, D27, F3) - Used for the presence or analysis of substances in the cerebrospinal fluid; also for examination of or changes in cerebrospinal fluid in disease states.

chemical synthesis (D2-23, D25-27) - Used for the chemical preparation of molecules in vitro. For the formation of chemical substances in organisms, living cells, or subcellular fractions, "biosynthesis" is used.

chemically induced (C1-20, C22, C23, F3) - Used for diseases, syndromes, congenital abnormalities, or symptoms caused by chemical compounds in man or animals.

chemistry (A2-16, B1, B3-7, C4, D) - Used with chemicals, biological, and non-biological substances for their composition, structure, characterization, and properties; also used for the chemical composition or content of organs, tissue, tumors, body fluids, organisms, and plants. Excludes chemical analysis and determination of substances for which "analysis" is used; excludes synthesis for which "chemical synthesis" is used; excludes isolation and purification of substances for which "isolation & purification" is used.

classification (A11, A15, B, C, D, E1-4, E6, E7, F3, G1, G2, I2, I3, J, M, N2-4) - Used for taxonomic or other systematic or hierarchical classification systems.

complications (C, F3) - Used with diseases to indicate conditions that co-exist or follow, i.e., co-existing diseases, complications, or sequelae.

congenital (C1-12, C14, C15, C17, C19-23) - Used with disease headings to indicate those conditions existing at, and usually before, birth. It excludes morphologic abnormalities and birth injuries, for which "abnormalities" and "injuries" are used.

contraindications (D, E1-4, E6, E7) - Used with drugs, chemicals, and biological and physical agents in any disease or physical state that might render their use improper, undesirable, or inadvisable. Used also with contraindicated diagnostic, therapeutic, prophylactic, anesthetic, surgical or other procedures.

cytology (A2-10, A12-16, B1, B3, B5-7) - Used for normal cellular morphology of unicellular and multicellular organisms.

deficiency (D8, D12) - Used with endogenous and exogenous substances which are absent or in diminished amount relative to the normal requirement of an organism or a biologic system.

diagnosis (C, F3) - Used with diseases for all aspects of diagnosis, including examination, differential diagnosis and prognosis; excludes mass screening for which "prevention & control" is used. Excludes radiographic diagnosis for which "radiography" is used; excludes scintigraphic diagnosis for which "radionuclide imaging" is used; excludes ultrasonic diagnosis for which "ultrasonography" is used.

diagnostic use (D) - Used with chemical compounds, drugs, and physical agents when these substances are used for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.

diet therapy (C, F3) - Used with disease headings for dietary and nutritional management of the disease. The concept does not include vitamin or mineral supplements, for which "drug therapy" may be used.

drug effects (A2-16, B1, B3-7, D8, D12, G4-11) - Used with organs, regions, tissues, or organisms and physiological and psychological processes for the effects of drugs and chemicals.

drug therapy (C, F3) - Used with disease headings for the treatment of disease by the administration of drugs, chemicals, and antibiotics. For diet therapy and radiotherapy, use specific subheadings. Excludes immunotherapy for which "therapy" is used.

economics (C, D, E1-4, E6, E7, F3, G1, G2, I2, I3, J, N2-4) - Used for the economic aspects of any subject, as well as for all aspects of financial management. It includes the raising or providing of funds.

education (G1, G2, M) - Used for education, training programs, and courses in various fields and disciplines, and for training groups of persons.

embryology (A1-5, A7-10, A13, A14, B2, B6, C) - Used with organs, regions, and animal headings for embryologic and fetal development. It is used also with diseases for embryologic factors contributing to postnatal disorders.

enzymology (A2-16, B1, B3-7, C, F3) - Used with organisms, except vertebrates, and with organs and tissues. It is also used with diseases for enzymes during the course of the disease, but excludes diagnostic enzyme tests, for which "diagnosis" is used.

epidemiology (C, F3, Z) - Used with human and veterinary diseases for the distribution of disease, factors which cause disease, and the attributes of disease in defined populations; includes incidence, frequency, prevalence, endemic and epidemic outbreaks; also surveys and estimates of morbidity in geographic areas and in specified populations. Used also with geographical headings for the location of epidemiologic aspects of a disease. Excludes mortality for which "mortality" is used.

ethnology (C1-21, C23, F3, Z) - Used with diseases and selected terms for ethnic, cultural, anthropological, or racial aspects, and with geographic headings to indicate the place of origin of a group of people.

etiology (C, F3) - Used with diseases for causative agents including microorganisms and includes environmental and social factors and personal habits as contributing factors. It includes pathogenesis.

genetics (B, C, D8, D11-13, D17, D24, F3, G4-11) - Used for mechanisms of heredity and the genetics of organisms, for the genetic basis of normal and pathologic states, and for the genetic aspects of endogenous chemicals. It includes biochemical and molecular influence on genetic material.

growth & development (A1-5, A7-10, A13, A14, B) - Used with microorganisms, plants, and the postnatal period of animals for growth and development. It includes also the postnatal growth or development of organs or anatomical parts.

history (C, D, E1-4, E6, E7, F3, F4, G1, G2, I, J, M, N2-4) - Used for the historical aspects of any subject. It includes brief historical notes but excludes case histories.

immunology (A2-16, B, C, D1-24, D27, F3, G4-10) - Used for immunologic studies of tissues, organs, microorganisms, fungi, viruses, and animals. It includes immunologic aspects of diseases but not immunologic procedures used for diagnostic, preventive, or therapeutic purposes, for which "diagnosis", "prevention & control", or "therapy" are used. The concept is also used for chemicals as antigens or haptens.

injuries (A1-5, A7-10, A13, A14, B2) - Used with anatomic headings, animals, and sports for wounds and injuries. Excludes cell damage, for which "pathology" is used.

innervation (A1-5, A7, A9, A10, A13, A14) - Used with organs, regions, or tissues for their nerve supply.

instrumentation (E1-4, G1, G2) - Used with diagnostic or therapeutic procedures, analytic techniques, and specialties or disciplines, for the development or modification of apparatus, instruments, or equipment.

isolation & purification (B3-5, B7, D) - Used with bacteria, viruses, fungi, protozoa, and helminths for the obtaining of pure strains or for the demonstration of the presence of or identification of organisms by DNA analyses, immunologic, or other methods, including culture techniques. It is used also with biological substances and chemicals for the isolation and purification of the constituents.

legislation & jurisprudence (G1, G2, I2, I3, M, N2-4) - Used for laws, statutes, ordinances, or government regulations, as well as for legal controversy and court decisions.

manpower (G1, G2) - Used with disciplines and programs for the demand, supply, distribution, recruitment, and use of personnel.

metabolism (A2-16, B, C, D, F3) - Used with organs, cells and subcellular fractions, organisms, and diseases for biochemical changes and metabolism. It is used also with drugs and chemicals for catabolic changes (breakdown of complex molecules into simpler ones). For anabolic processes (conversion of small molecules into large), BIOSYNTHESIS is used. For enzymology, pharmacokinetics, and secretion use the specific subheadings.

methods (E1-4, G1, G2) - Used with techniques, procedures, and programs for methods.

microbiology (A, B1, B2, B6, C, E7, F3, J2) - Used with organs, animals, and higher plants and with diseases for microbiologic studies. For parasites, "parasitology" is used; for viruses, "virology" is used.

mortality (C, E1, E3, E4, F3) - Used with human and veterinary diseases for mortality statistics. For deaths resulting from various procedures statistically but for a death resulting in a specific case, use FATAL OUTCOME, not /mortality.

nursing (C, E1-4, F3) - Used with diseases for nursing care and techniques in their management. It includes the nursing role in diagnostic, therapeutic, and preventive procedures.

organization & administration (G1, G2, I2, N2) - Used for administrative structure and management.

parasitology (A, B1, B2, B6, C, E7, F3, J2) - Used with animals, higher plants, organs, and diseases for parasitic factors. In diseases, it is not used if the parasitic involvement is implicit in the diagnosis.

pathogenicity (B1, B3-5, B7) - Used with microorganisms, viruses, and parasites for studies of their ability to cause disease in man, animals, or plants.

pathology (A1-11, A13-16, C, F3) - Used for organ, tissue, or cell structure in disease states.

pharmacokinetics (D1-23, D25-27) - Used for the mechanism, dynamics and kinetics of exogenous chemical and drug absorption, biotransformation, distribution, release, transport, uptake and elimination as a function of dosage, extent and rate of metabolic processes.

pharmacology (D) - Used with drugs and exogenously administered chemical substances for their effects on living tissues and organisms. It includes acceleration and inhibition of physiological and biochemical processes and other pharmacologic mechanisms of action.

physiology (A, B, D8, D11-13, D17, D24, G4-11) - Used with organs, tissues, and cells of unicellular and multicellular organisms for normal function. It is used also with biochemical substances, endogenously produced, for their physiologic role.

physiopathology (A1-5, A7-10, A13, A14, C, F3) - Used with organs and diseases for disordered function in disease states.

poisoning (B6, D, J2) - Used with drugs, chemicals, and industrial materials for human or animal poisoning, acute or chronic, whether the poisoning is accidental, occupational, suicidal, by medication error, or by environmental exposure.

prevention & control (C, F3) - Used with disease headings for increasing human or animal resistance against disease (e.g., immunization), for control of transmission agents, for prevention and control of environmental hazards, or for prevention and control of social factors leading to disease. It includes preventive measures in individual cases.

psychology (C, E1-4, E6, F3, I3, M) - Used with non-psychiatric diseases, techniques, and named groups for psychologic, psychiatric, psychosomatic, psychosocial, behavioral, and emotional aspects, and with psychiatric disease for psychologic aspects; used also with animal terms for animal behavior and psychology.

radiation effects (A, B1, B3-7, D, G4-11, J2) - Used for effects of ionizing and nonionizing radiation upon living organisms, organs and tissues, and their constituents, and upon physiologic processes. It includes the effect of irradiation on drugs and chemicals.

radiography (A, C, F3) - Used with organs, regions, and diseases for x-ray examinations. It does not include radionuclide imaging for which "radionuclide imaging" is used.

radionuclide imaging (A, C, F3) - Used for radionuclide imaging of any anatomical structure, or for the diagnosis of disease.

radiotherapy (C) - Used with disease headings for the therapeutic use of ionizing and nonionizing radiation. It includes the use of radioisotope therapy.

rehabilitation (C1-21, C23, E4, F3) - Used with diseases and surgical procedures for restoration of function of the individual.

secondary - Used with neoplasms to indicate the secondary location to which the neoplastic process has metastasized.

secretion (A2-16, C4, D8, D11-13) - Used for the discharge across the cell membrane, into the intracellular space or ducts, of endogenous substances resulting from the activity of intact cells of glands, tissues, or organs.

standards (D1-23, D25-27, E1-4, E6, E7, F4, G1, G2, I2, J, N2-4) - Used with facilities, personnel, and program headings for the development, testing, and application of standards of adequacy or acceptable performance and with chemicals and drugs for standards of identification, quality, and potency. It includes health or safety standards in industries and occupations.

statistics & numerical data (E1-4, E6, E7, F4, G1, G2, I2, I3, J1, M, N2-4) - Used with non-disease headings for the expression of numerical values which describe particular sets or groups of data. It excludes manpower distribution for which "manpower" is used and excludes supply or demand for which "supply & distribution" is used.

supply & distribution (D1-23, D25-27, E7, J2) - Used for the quantitative availability and distribution of material, equipment, health services, personnel, and facilities. It excludes food supply and water supply in industries and occupations.

surgery (A1-5, A7-10, A13, A14, B2, C, F3) - Used for operative procedures on organs, regions, or tissues in the treatment of diseases, including tissue section by lasers. It excludes transplantation, for which "transplantation" is used.

therapeutic use (B6, D) - Used with drugs, biological preparations, and physical agents for their use in the prophylaxis and treatment of disease. It includes veterinary use.

therapy (C, F3) - Used with diseases for therapeutic interventions except drug therapy, diet therapy, radiotherapy, and surgery, for which specific subheadings exist. The concept is also used for articles and books dealing with multiple therapies.

toxicity (B6, D, J2) - Used with drugs and chemicals for experimental human and animal studies of their ill effects. It includes studies to determine the margin of safety or the reactions accompanying administration at various dose levels. It is used also for experimental studies of exposure to environmental agents.

transmission (C1-3, C22) - Used with diseases for studies of the modes of transmission.

transplantation (A2, A3, A5-11, A13-16) - Used with organs, tissues, or cells for transplantation from one site to another within the same subject, or from one subject to another of the same species or different species.

trends (E1-4, E6, E7, G1, G2, I2, I3, N2-4) - Used for the manner in which a subject changes, qualitatively or quantitatively, with time, whether past, present, or future. It excludes discussions of the course of disease in particular patients.

ultrasonography (A, C, F3) - Used with organs and regions for ultrasonic imaging and with diseases for ultrasonic diagnosis. Does not include ultrasonic therapy.

ultrastructure (A2-11, A13-16, B1, B3-7, C4, D8, D12) - Used with tissues and cells (including neoplasms) and microorganisms for microanatomic structures, generally below the size visible by light microscopy.

urine (B2, C, D1-24, D27, F3) - Used for the presence or analysis of substances in the urine, and also for the examination of, or changes in, the urine in disease.

utilization (E1-4, E6, E7, N2) - Used with equipment, facilities, programs, services, and health personnel for discussions, usually with data, of how much they are used. It includes discussions of overuse and underuse.

veterinary (C1-21, C23, E1-4, E6, E7) - Used for naturally occurring diseases in animals, or for diagnostic, preventive, or therapeutic procedures used in veterinary medicine.

virology (A, B1-3, B5-7, C, E7, F3, J2) - Used with organs, animals, and higher plants and with diseases for virologic studies. For bacteria, rickettsia, and fungi, "microbiology" is used; for parasites, "parasitology" is used.

USE OF MEDICAL SUBJECT HEADINGS FOR CATALOGING

The National Library of Medicine uses *MeSH* as the authoritative source for the subject cataloging of books, serials, audiovisual materials, and electronic resources.

Beginning with 1999 MeSH, the Cataloging Section changed its practices for the use of MeSH descriptors as well as the subsequent storage and display of descriptors. These changes were made (1) to simplify access to information for the consumer by providing consistency in NLM's use of terminology and subject structures; (2) to facilitate retrieval using the same terms with like results for articles, books, nonprint materials, electronic resources, etc.; (3) to support cross database searching; and (4) to integrate cataloging and indexing subject analysis practices.

With 1999 MeSH, Cataloging ceased its previous practices of modifying MeSH descriptors by form, geographic, or language subheadings. A MeSH descriptor is only modified by topical subheadings. All of the 82 topical subheadings which are available for use in indexing are also available for cataloging usage. Publication types replace form subheadings, MeSH descriptors replace geographic subheadings and a separate language field replaces language subheadings. The physical format of an item has also been dropped from the subject heading string since that information is included elsewhere in the bibliographic record. For more detailed information, see Cataloging Practices, page I-104 in the *Medical Subject Headings Annotated Alphabetic List, 2000*.

NEW HEADINGS—2000

A new heading is either completely new - with no directly corresponding heading in 1999 *MeSH*, or it replaces a descriptor which was deleted for 2000. In either case, the previously-indexed-under heading was used before 2000 to index material now covered by the new heading. The previously-indexed-under heading is followed by a date or range of dates as a guide to the period of time in which it was used for the concept in *Index Medicus*. Therefore, a previously-indexed-under heading may not be in current use but will apply to the dates given. Note, however, that the beginning date is often established by searching the online databases, and thus may be later than the time period for *Index Medicus*.

If a new heading replaces an existing heading, the new heading is following by an asterisk.

New Heading

Previously-Indexed Under Heading

Abducens Nerve Diseases

Abducens Nerve (1977-1980)
Cranial Nerve Diseases (1981-1999)
Peripheral Nervous System Diseases (1974-1980)

Abducens Nerve Injury

Abducens Nerve (1977-1999)
Ophthalmoplegia (1979-1999)

Acarbose

Cyclohexanols (1979-1981)
Polysaccharides, Bacterial (1978-1979)
Trisaccharides (1986 - 1999)

Acatalsia

Catalase (1965-1999)

Accessory Nerve Diseases

Accessory Nerve (1965-1999)
Cranial Nerve Diseases (1981-1999)

Acupuncture, Ear

Acupuncture (1972-1990)
Acupuncture Therapy (1990-1999)

Adie Syndrome*

Adie's Syndrome (1966-1999)

ADP-Ribosylation Factor 1

G-Proteins (1993-1999)

ADP-Ribosylation Factors

G-Proteins (1992-1999)

Afipia

Cat-Scratch Disease/microbiology (1992-1999)
Gram-Negative Bacteria (1992-1999)

AIDS Arteritis, Central Nervous System

Acquired Immunodeficiency Syndrome (1987-1999)
Vasculitis (1987-1999)

Air Abrasion, Dental

Dental Cavity Preparation (1996-1999)

Alcohol Withdrawal Seizures

DELETED HEADINGS—2000

The following headings are no longer used for indexing or cataloging. Material formerly listed under the old heading will appear under the replaced-by-heading.

Deleted Heading

Amnioscopy
Cervico-Brachial Neuralgia
Embryo Resorption
Encephalitis Periaxialis
Epidermal Growth Factor Receptor
 Protein-Tyrosine Kinase
G-Proteins
GTP Phosphohydrolase
Insulin Receptor Protein-Tyrosine Kinase
Neuroepithelioma
Protein Structure
Receptor Protein-Tyrosine Kinase
Respiratory Circulation
Rosenzweig Picture-Frustration Study
Surgical Procedures, Laparoscopic
Surgical Procedures, Endoscopic
Szondi Test

Replaced-by Heading

Fetoscopy
Brachial Plexus Neuritis
Embryo Loss
Diffuse Cerebral Sclerosis of Schilder
Receptor, Epidermal Growth Factor

GTP-Binding Proteins
GTP Phosphohydrolases
Receptor, Insulin
Neuroectodermal Tumors, Primitive, Peripheral
Protein Conformation
Receptor Protein-Tyrosine Kinases
Pulmonary Circulation
Projective Techniques
Laparoscopy
Endoscopy
Projective Techniques

NEW HEADINGS—BY PREVIOUS INDEXING—2000

The following list is alphabetically arranged by the 1999 headings which have been replaced or further subdivided by a new heading. The existing heading is in the left column and the new heading is in the right. If a new heading is a one-to-one replacement of an existing heading, the new heading is followed by an asterisk.

EXAMPLE:

Acupuncture Therapy

Acupuncture, Ear

"Acupuncture Therapy" remains as a heading, but the more specific heading "Acupuncture, Ear" was introduced in 2000. Citations concerning the use of ear acupuncture that previously would have appeared under "Acupuncture Therapy" will no longer appear under that term but will be under the more specific term "Acupuncture, Ear" in the 2000 *Index Medicus*.

Previously-Indexed-Under Heading

BIBLIOGRAPHY

The following texts are regularly used by staff of the Medical Subject Headings Section in the creation and maintenance of MeSH. Some of those listed are considered standard sources for their fields (e.g., *Gray's Anatomy*, *Bergey's Manual of Systematic Bacteriology*), while others are utilized as reference works in certain subject areas. This bibliography does not include all texts used for the production of MeSH.

GENERAL

- Bennington, J.L., ed. Saunders dictionary and encyclopedia of laboratory medicine and technology. Philadelphia: Saunders, 1984.
- Dale, D.C. [and others], eds. Scientific American medicine. New York: Scientific American, Inc., 1997.
- Dorland's illustrated medical dictionary. 28th ed. Philadelphia: Saunders, 1994.
- Jablonski, S. Dictionary of medical acronyms and abbreviations. 3d ed. Philadelphia: Hanley & Belfus, 1998.
- Parker, S.P., ed. McGraw-Hill dictionary of scientific and technical terms. 5th ed. New York: McGraw-Hill, 1994.
- Segen, J.C. Current med talk: a dictionary of medical terms, slang & jargon. Stamford, CT: Appleton & Lange, 1995.
- Segen, J.C., ed. The dictionary of modern medicine. New Jersey: Parthenon, 1992.
- Sloane, S.B. Medical abbreviations and eponyms. 2d ed. Philadelphia: Saunders, 1997.
- Stedman's medical dictionary, illustrated. 26th ed. Baltimore: Williams & Wilkins, 1995.
- U.S. Department of Health and Human Services. National Institutes of Health. Division of Research Grants. CRISP thesaurus. Bethesda, MD: The Department, 1997.
